Project Charter

1. Problem Statement

- a) There is an absence of mobile applications such that you can anonymously share a moment with your local community through pictures, videos, and text on platforms.
- b) Through our extensive searching we have concluded that there exists no such application that offers the features listed above. While other applications share similar features such as video and pictures, none encompass these elements like our application plans on doing.

2. Project Objectives

- a)
 - Anonymously post videos, pictures, and text
 - Content voting system with comments
 - Application locality, content based on locality
 - Ability to flag for inappropriate content
 - Easy to use, clean GUI

3. Stakeholders

- a)
 - Development team listed at the top of the page
 - Project manager
 - Future users, including testers

4. Deliverables

- a) An android application developed in Java that allows for users to anonymously share photos and videos in a local community environment. Uses a database to manage posts and users to communicate with the front end GUI. Users will then be able to interact with the content.
